FLOOR TILES

Hemos vuelto a unir tecnología con naturaleza porque solo así se consiguen cosas extraordinarias. La aplicación de áridos muy finos y naturales ha permitido diseñar Vena con una variedad cromática y un dibujo irregular. Los diferentes tamaños de granulado utilizados otorgan una mayor profundidad y relieve a esta colección.

We have brought technology and nature together again because only in this way can extraordinary things be achieved. The application of very fine and natural aggregates has allowed us to design Vena with a chromatic variety and an irregular pattern. The different sizes of the granules used give this collection greater depth and relief.

MADE IN EUROPE, using top-quality processes.

PORCELANOSA's kitchens are fully manufactured in Europe in accordance with meticulous quality controls. Top-range cabinet hardware, made by leading European brands, is used in all its products.

INCREASED STORAGE CAPACITY

Emotions® Kitchens module units have slightly increased their dimensions and the interior space has been optimised to considerably increase their storage capacity.

Rugged and stylish ALUMINUM PLINTHS.

The plinths of emotions® kitchens have a minimum height of 6 cm, thus allowing for the possibility of higher base units and more storage space. Because the plinths are set back from the front of the units, they are concealed, creating the impression of a floating kitchen. The plinths are made of extruded aluminium, a material with a high resistance to rust. They also feature a rubber seal along the bottom to protect them from small spillages of water. The plinths can be removed since they are clipped to the legs of the units, thus making it easy to clean the space underneath..

WIDE RANGE OF options for interior equipment. The emotions® kitchen collection features a wide range of different organizational and storage solutions. These include functional drawer organizers made of oak or steel to match the rest of the drawer and pull-out fittings to optimize the available space, making it easier to store objects and to reach any utensil or food product at any time.

MODULES ADAPT to household appliances.

Oven or refrigerator column modules 100% configurable so a precise integration is achieved with a more refined aesthetics of any appliance because does not require trimming or finishing to cover gaps in standard sizes. Also, continuing with the minimalist design, a concealed ventilation pedestal has been designed, in order to replace the unattractive ventilation grilles. This pedestal supports the weight of the refrigerator and favours ventilation, increasing its useful life.

Made with WATER-RESISTANT board for durability. Technical specifications

The carcasses of emotions® kitchen units are made of water resistant E-rated particleboard, with a high resistance, low formaldehyde emissions and thickness of 19 mm to guarantee a higher bending strength. Because they are water resistant, they are more resistant to moisture, providing greater protection and making them less vulnerable to the effects of water over the passage of time.

The doors are laseredged with polypropylene edgebanding to ensure a more watertight, long-lasting, almost invisible seam.

MAXIMUM STABILITY guaranteed.

Emotions® kitchens by GAMADECOR guarantee robust resistance and greater stability thanks to their construction, using hard wood dowels to assemble the components, glued at the same time as the thicker-than normal (8mm) back panel is inserted. The end result is a compact, highly stable ensemble. The weight is also equally distributed through the side panels and base to the stainless steel height-adjustable legs. This prevents the unit from gradually sagging due to the weight of the countertop.

More SUSTAINABLE kitchens

GAMADECOR is committed to environmental care. That is why a Chain of Custody control system for wood has been introduced so as to ensure that the raw materials used to manufacture the company's products are sourced from controlled forests. In this way, Gamadecor can offer products with full environmental guarantees.

Top-quality cabinet hardware by **LEADING EUROPEAN BRANDS**

Emotions® kitchens feature the latest models in cabinet hardware by leading European brands. This leads to kitchens with cutting-edge mechanisms, made of top-quality materials, with the guarantee of manufacturers that have been innovating for decades and improving the resistance and performance of these systems.

Drawers with an **EXCLUSIVE finish**

The drawers and deep drawers are made using the top-range Vionario model by Grass, with the thinnest aluminium sides on the market, thus providing added storage capacity. The drawers have a finish exclusive to GAMADECOR's emotions® kitchen range, with full-extension soft-close drawer runners. This protects the unit from impacts if the drawers slam shut, preventing it from breaking before it reaches the end of its useful life. The drawers can also withstand weights of up to 80 kg and they have passed the most demanding tests, with open-close cycles that surpass the 60,000 cycles required in the corresponding standard.

Hinges with **ADJUSTABLE DAMPING.**

Top-range Tiomos hinges by Grass are used for the doors. The hinges are fully metallic and three dimensionally adjustable, with a high resistance to moisture, a simple clip system for mounting or removing the doors and, like the drawers, they incorporate a soft-close system to protect the door from impacts. This model of hinge also features an easily accessible adjustor mechanism, with three positions, to adjust the strength needed to close the door as required.

MORE RESISTANT cabinet hangers.

The wall units are hung from the wall using two top-range, fully metallic HETTAL hangers, each able to withstand a weight of up to 65 kg (130 kg per unit). These fittings are concealed behind the back of the unit and they distribute the weight evenly between the top and sides to ensure greater stability. They can be regulated from inside the unit to make it easier to position.

CONCEALED shelf supports.

The inner shelf supports of emotions® kitchen units are the most sophisticated elegant ones on the market: the Morí model by Italiana Ferramenta. They are embedded in the shelves and the different heights of the shelves are marked on the carcass without perforating it, ensuring elegant, clean, lightweight-looking interiors.

Front Finish Features :

Flat surface with wood imitation laminate finish in both faces. Front face with textured finish. Four PP edged pieces the same colour as the front. Strip thickness 1,2 mm and joined to the edge by laser melting. Chipboard substrate.

Selected front finishes:

Door thickness, 19 mm.
Integrated door handle in the upper part of the door

Interior finish features:

Structure material with 19 mm high density and water-resistant chipboard finished in light grey laminate, Caolin, Gres and Legamo ,fine structure finish, scratch resistant and easy to clean. Technical specifications in compliance with DIN EN 312. These particleboards are certified with CARB2 / EPA label (the lowest formaldehyde emissions).
